Our Experience

For the most part, our group experience was rather smooth. We collaborated across the various assignments, voicing our interests and concerns along the way. Responsibilities were shifted around quite often, so everyone was doing their part.

However, there were some concepts that did not make the cut. This includes idea of checking for duplicate passwords, being able to generate multiple at once, and feedback on complexity. Ultimately, it came down to putting out something realistic as opposed to committing to every idea.
